

ON EMBEDDINGS OF MIXED NORM SPACES

ROBERT ALGERVIK

(Karlstad University, Sweden)

We study mixed norm spaces that arise in connection with Sobolev type embeddings. The spaces of such type were first considered by Gagliardo (1957). We prove embedding theorems that show how are the properties of linear sections of a rearrangable function f reflected on the global behaviour of f .

This is a joint work with V.I. Kolyada.
